

Q) Add some dummy Employee data based on this schema given below in MongoDB.

```
{  
  emp_name: String,  
  job_name: String,  
  hire_date: Date,  
  salary: Number  
}
```

Create a GET route API which will return an Employee based on the unique ID. Create a Redis Cache and use it to increase the request-response performance.

Marking Scheme

[Correct Code Execution: 10, Correct Approach: 3, Code Readability: 2]
