

Like we had a CC regarding different styles for buttons, today, your task is to create a Color Tiles.

Note:

- There should be at least 10 tiles/squares/box with unique colors shown inside them.
- On hover, the tiles should get a shadow, rotate 360 degree and scale up to 1.5 in a transition.
- The text inside the box which either shows the color code in hex format or have a label like 'Alert', 'Warning' etc. You can also mix-match with labels and color codes. Ex. You can show few colors with text inside them as “#FFFFFF” and few others labels like 'Alert', 'Warning' etc.
- You can also use additional CSS styles to make your entire page beautiful.
- There should not be any embedded or inline styles in your HTML markup.

*Bonus: Think of how you can stop the rotation of the text inside the tile.*
