

Q1) Using web sockets, create an application which updates a counter value (+1) every time a client clicks on increment button. Make sure you display the updated counter value to all of the clients in the web page

For ex, if one client clicks on increment button, then the current client and all the other connected clients (through web socket) should receive the updated value and show it on the page accordingly

**Note:**

- Use the [WebSockets \(ws\) docs to help out](#)

**Marking Scheme**

[Correct Code Execution: 10, Correct Approach: 3, Code Readability: 2]
