

Q) Make an app which displays the list of posts and when you click on a post the details on the details panel.

Do all the things using **function based components** and use the hooks, **no class based components**.

Refer below image for layout:

For getting the post list and details use:

<https://jsonplaceholder.typicode.com/posts>

<https://jsonplaceholder.typicode.com/posts/:id>

Marking Scheme

[Correct Code Execution: 10, Correct Approach: 3, Code Readability: 2]
