For this assignment, you have to implement the following design.

This is a snapshot of how Instagram looks on desktop browser.

Your task is to design this page with correct layout. You can use Bootstrap if you want or just can write your own CSS from scratch.

Things to note:

- No inline/internal CSS style sheets.
- You can change the content (images, username, following etc.)
- There must be at least 9 images in gallery with 3 images per row.
- You can use FontAwesome, Themify Icons or Bootstrap Icons for the icons (video icon & carousel icon). However, those icons are optional.
- There must be some hover effect when the user hovers the mouse pointer on the image gallery.
- Focus on the design and not the functionality (button click etc)
